AMENDMENT

In The Claims:

Claim 1. (Currently Amended) A control circuit, for a frequency converter that has a starter circuit for determining whether or not to turn on/off said control circuit, comprising:

a switch circuit, being determined whether or not to turn on/off by said starter circuit;

a starter relay, for turning on said frequency converter, wherein when a voltage level of a power supply to said control circuit is below a first predetermined voltage level, said starter relay is turned off, and when said voltage level of said power supply to said control circuit is raised to above a second predetermined voltage level, said starter relay is turned on;

a timer relay, wherein when said voltage level of said power supply to said control circuit is below said first predetermined voltage level, said timer relay remains on for a predetermined time period; and

a timer switch, wherein said timer relay determines whether or not to turn on/off said timer switch;

wherein said timer switch and said switch circuit have their contacts ~~[[are]]~~ connected in parallel forming a first parallel circuit, said starter relay and timer relay have their contacts ~~[[are]]~~ connected in parallel forming a second parallel circuit, said first parallel circuit and said second circuit are connected in series, and said starter circuit is coupled to said switch circuit.

2. (Currently Amended) The control circuit of claim 1, further comprising a stop-reset switch, said stop-reset switch ~~and said timer relay being connected in parallel and being adapted~~

to determine whether or not to turn on said timer relay.

3. (Previously Presented) The control circuit of claim 1, wherein when said voltage level of said power supply to said control circuit rises to above the second predetermined voltage level during said predetermined time period, said starter relay is turned on automatically.

4. (Previously Presented) The control circuit of claim 1, wherein when said voltage level of said power supply to said control circuit do not rise to above the second predetermined voltage level during said predetermined period, said timer relay is turned off.
